

Sergii Danyliuk

Platform Engineer | AWS | Kubernetes | Terraform | Agentic AI Workflows

Miami, FL | sergii.dan.work@gmail.com | 786-651-7421 | [linkedin.com/in/sergii-danyliuk](https://www.linkedin.com/in/sergii-danyliuk) | sergii-dan.info

SUMMARY

AWS, Kubernetes, and Terraform certified Platform Engineer with 5+ years of experience designing, building, and operating scalable, secure, highly available AWS infrastructure that application teams depend on. Deep hands-on expertise in Terraform, Kubernetes (EKS), CI/CD, Helm, and GitOps (ArgoCD), with proven multi-cluster management, production cluster migrations, and observability with SLOs. Builds AI-powered internal tooling with Claude Code and Codex, including custom agent skills that accelerate incident response and troubleshooting.

EXPERIENCE

Platform Engineer – Chewy | Plantation, FL | Sep 2023 – Present

- Cut EKS compute cost ~30% and node scale-up time ~80% by migrating from Cluster Autoscaler to Karpenter — just-in-time, right-sized nodes with spot/on-demand NodePool separation.
- Moved app delivery to declarative, pull-based GitOps with ArgoCD — Git as the source of truth, automated drift detection, and fast rollbacks across 40+ apps and 7 EKS clusters.
- Automated TLS, DNS, and secrets with cert-manager, external-dns, and the AWS Secrets Manager CSI driver over IRSA — ACM-synced certs, Route53 records, and pod secret injection with no manual steps.
- Ran Multi-AZ PostgreSQL on RDS with IAM auth via IRSA — short-lived tokens instead of static credentials — plus automated snapshot lifecycle and PITR restore drills.
- Built platform observability with Prometheus/Grafana and EFK, anchored to a 99.5% availability SLO with error-budget and burn-rate alerting.
- Built 15+ Claude Code and Codex agent skills that automate incident triage and troubleshooting — cutting mean resolution time from ~2 hours to under 30 minutes.

DevOps Engineer – Samsara | Remote | Oct 2020 – Aug 2023

- Migrated live infrastructure from CloudFormation to Terraform — 150+ resources across 5 AWS accounts — with zero downtime via a documented runbook and rollback plan.
- Wired GitHub Actions CI/CD across infra and apps with OIDC federation — plan-on-PR / apply-on-merge for Terraform, image build → ECR → Helm deploy for services.
- Replaced long-lived IAM users with role-based access across 5 AWS accounts — 50+ scoped roles, zero standing access keys in CI via OIDC.
- Designed and provisioned custom AWS VPC networking — public/private subnet tiers, custom route tables, and IGW/NAT egress — giving each account isolated, controlled network boundaries.
- Cut S3 storage cost ~\$20K/year with lifecycle rules that transition and expire objects by age across buckets.
- Optimized multi-stage Docker builds across Go, Node.js, and Python microservices on a distroless base — cutting image sizes ~60% and shrinking pull/deploy times and attack surface.

SKILLS

Cloud & Infrastructure: AWS, Linux, Docker, Kubernetes, Karpenter

IaC & Delivery: Terraform, ArgoCD (GitOps), GitHub Actions, Helm

Security: IAM, IRSA, Kubernetes RBAC, OIDC

Networking: cert-manager, external-dns

Observability: Prometheus, Grafana, Alertmanager, CloudWatch, EFK (Fluent Bit / Elasticsearch / Kibana)

AI / Agentic: Claude Code, Codex, context engineering (CLAUDE.md / AGENTS.md), CI-gated review automation (Python)

Scripting: Bash, Python

CERTIFICATIONS

- AWS Certified Solutions Architect – Associate
- HashiCorp Certified: Terraform Associate (004)
- CKA: Certified Kubernetes Administrator
- CKAD: Certified Kubernetes Application Developer
