

Sergii Danyliuk

Platform Engineer · AWS · Kubernetes · Terraform · Agentic AI Workflows

Miami, FL · sergii.dan.work@gmail.com · 786-651-7421 · [linkedin.com/in/sergii-danyliuk](https://www.linkedin.com/in/sergii-danyliuk) · sergii-dan.info

SUMMARY

AWS, Kubernetes, and Terraform experienced Platform Engineer with 5+ years building and operating application infrastructure that engineering teams depend on. Deep hands-on experience with CI/CD pipelines, Infrastructure as Code, Helm, and GitOps (ArgoCD), with proven multi-cluster management, production cluster migrations, and observability. Builds AI-powered internal tooling with Claude Code and Codex, including 30+ agent skills that accelerate all the platform engineering work.

EXPERIENCE

Platform Engineer — Chewy | Plantation, FL | Sep 2023 – Present

- Built 30+ Claude Code and Codex agent skills adopted by platform engineers, automating infra provisioning, change management, and production troubleshooting.
- Cut EKS compute cost ~30% and node scale-up time ~80% by migrating provisioning from Cluster Autoscaler to Karpenter - just-in-time, right-sized nodes with workload consolidation, split across NodePools.
- Moved app delivery to declarative, pull-based GitOps with ArgoCD - Git as the source of truth, automated drift detection, and fast rollbacks across 40+ apps and 7 EKS clusters.
- Automated TLS, DNS, and secrets with cert-manager, external-dns, and the AWS Secrets Manager CSI driver - ACM-synced certs, Route53 records, and pod secret injection with no manual steps, authenticated through per-pod IAM roles (IRSA).
- Cut MTTR for production incidents on EKS from hours to under 30 minutes by rebuilding Grafana dashboards around RED metrics and rolling out OpenTelemetry tracing into Tempo, with Prometheus exemplars linking latency spikes directly to the failing trace.
- Migrated the traffic plane off ingress-nginx to Gateway API on the AWS Load Balancer Controller - shared dual-stack ALBs, Ingress - HTTPRoute cutover with zero downtime.

DevOps Engineer — Samsara | San Francisco, CA (Remote) | Oct 2020 – Aug 2023

- Migrated live infrastructure from CloudFormation to Terraform - 150+ resources across 5 AWS accounts - with zero downtime via a documented runbook and rollback plan.
- Wired GitHub Actions CI/CD across infra and apps with OIDC federation - plan-on-PR / apply-on-merge for Terraform, image build - ECR - Helm deploy for services.
- Replaced long-lived IAM users with role-based access across 5 AWS accounts - 50+ scoped roles, zero standing access keys in CI via OIDC.
- Cut S3 storage cost ~\$20K/year with lifecycle rules that transition and expire objects by age across buckets.
- Optimized multi-stage Docker builds across Go, Node.js, and Python microservices on a distroless base - cutting image sizes ~60% (typical service ~1.2 GB - ~450 MB) and shrinking pull/deploy times and attack surface.

SKILLS

Cloud & Infra: AWS, Linux, Docker, Kubernetes

Scaling: Karpenter, KEDA, HPA

IaC & Delivery: Terraform, ArgoCD (GitOps), GitHub Actions, Helm

Security: IAM, IRSA, Kubernetes RBAC, OIDC

Networking: Gateway API, AWS Load Balancer Controller, cert-manager, external-dns

Observability: OpenTelemetry, Prometheus, Grafana, Tempo, Alertmanager, CloudWatch, EFK (Fluent Bit / Elasticsearch / Kibana)

AI/Agentic: Claude Code, Codex, context engineering (CLAUDE.md/AGENTS.md)

Scripting: Bash, Python

CERTIFICATIONS

- AWS Certified Solutions Architect - Associate
- HashiCorp Certified: Terraform Associate (004)
- CKA: Certified Kubernetes Administrator
- CKAD: Certified Kubernetes Application Developer
